Posing a Research Question

Directions: Search your topic in the required background sources: Access Science and Encyclopedia Britannica. Review the information found, assess what conversations are being had and come up with three or more questions based on the information presented. What interests you most? What questions are researchers still trying to understand? Why does the disease matter? How does it affect society?

Example Question: *My topic was celiac disease*

Does the timing of gluten introduction influence onset and severity of celiac disease?

How could they make the current blood tests for diagnosis of celiac disease more reliable?

What is the relationship between undiagnosed celiac disease and cancer?
